

# Invasive species management & the human dimension

**A few examples how the social sciences can contribute to better decision making: The case of *Elodea spp.***

Tobias Schwörer

Cordova Elodea Workshop March 3rd 2014

UAA Institute of Social  
and Economic Research  
UNIVERSITY of ALASKA ANCHORAGE

*“It is doubtful whether universal species eradication regardless of cost is even possible, or if possible, whether it holds a moral trump card over all other priorities such as our children’s health and education.”*

Jason F. Shogren

Education

## **In Alaska and other energy states, low oil prices put pressure on public schools**

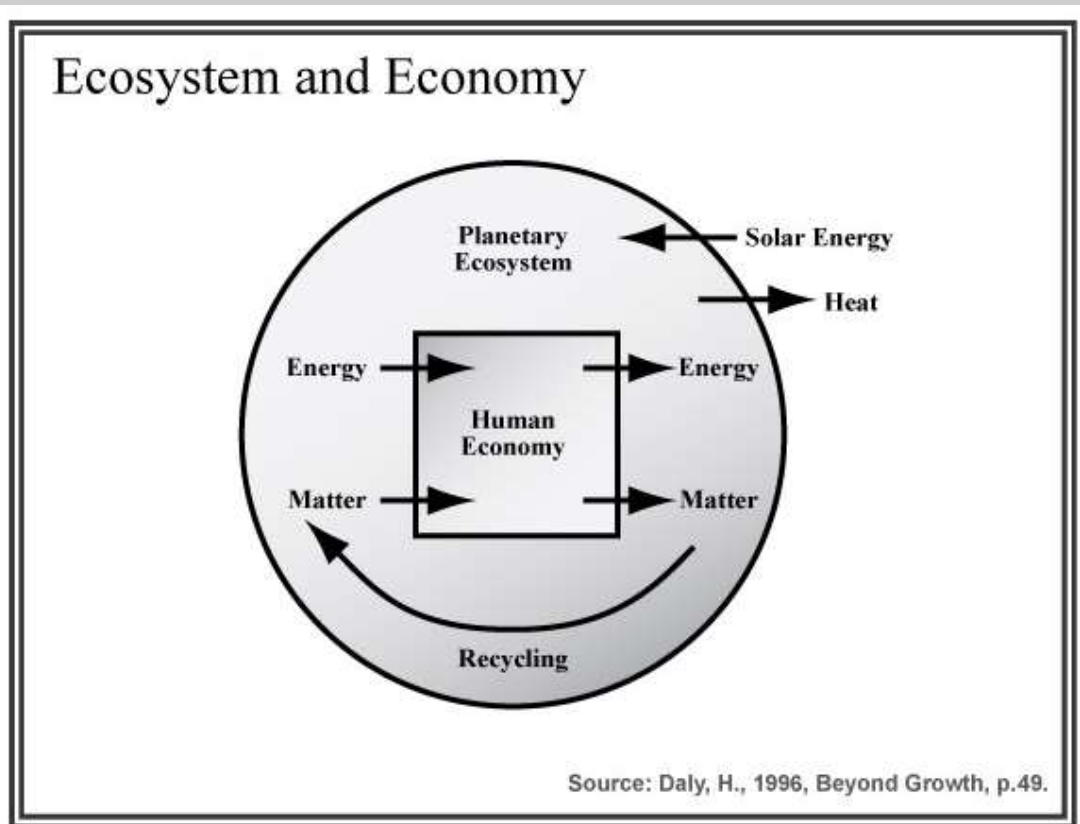

Washington Post January 2015

# Greek: Οἶκος "house"

Herman E. Daly

*"The economy is a wholly owned subsidiary of the environment, not the reverse."*

# Why consider the human dimension in invasive species management?

We are the primary vector

We benefit from nature

We deal with change and try to be better off as a society

# From risk assessment to risk management

- Optimal management action (spending \$) influenced by how reliably we predict potential outcomes.
- Large uncertainties
- Willingness to *work with/account for uncertainty* rather than ignoring it.

# Some sources of uncertainty

- • Inability to completely understand consequences
- Transferability and measurement error in predicting
  - Biophysical change
  - • Economic change
  - Change is dynamic
- • Type and rate of spread
- Policy irreversibility
- Treatment efficacy
- Spatial dynamics of invasion process

# Some fundamental questions

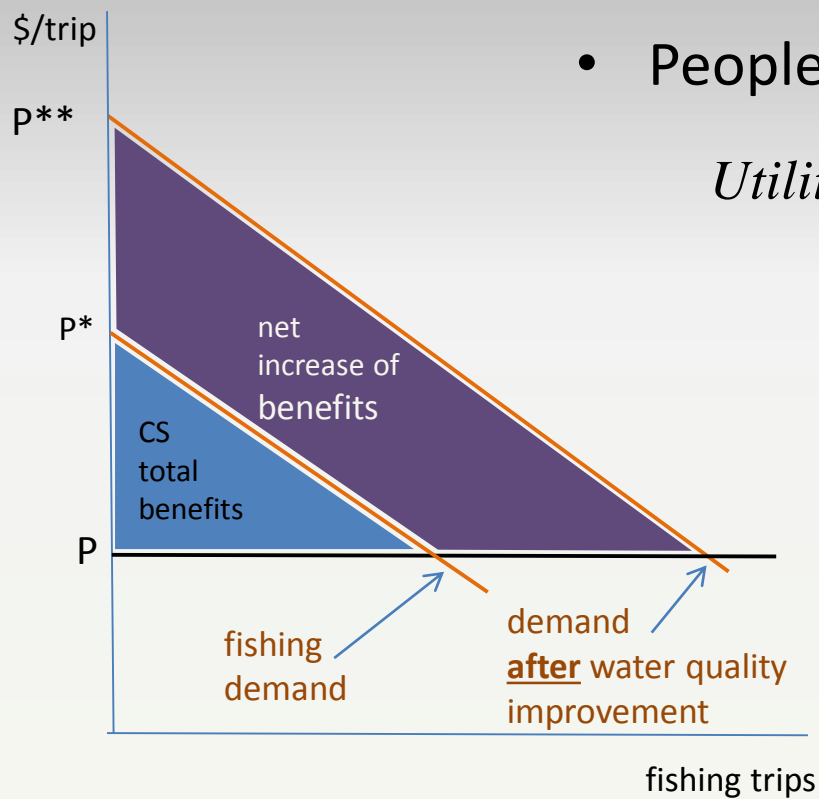

- Economic:
  - How are we going to be better (best) off?
  - What are the values at stake and whose values count?
  - What are the costs of inaction/delay?
  - Are the benefits of action greater than the costs of (in)action?

# Individual demand for invasive species management

- People's preferences count

$$Utility = f(goods, ES)$$

# Working with uncertainty in decision making

## Timely response:

- Get the best available information at the time
  - Available data & literature
  - Learn from other places
  - Include expert opinion  
(**not** a substitute for good science!)
- Decision analysis evaluating management alternatives

# Past, current and upcoming Elodea-related research

1. Eliciting expert knowledge
2. Results from stakeholder survey on the Kenai
3. Vector analysis in the Copper River Delta
4. Social science research this summer and fall

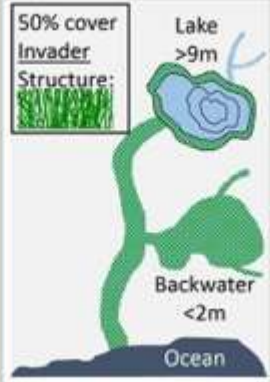

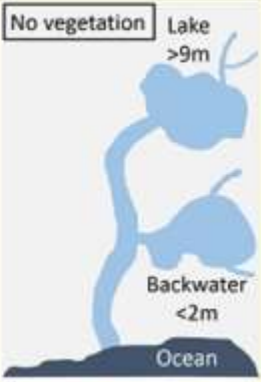

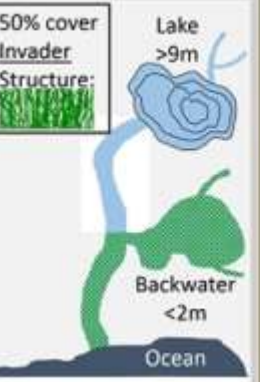

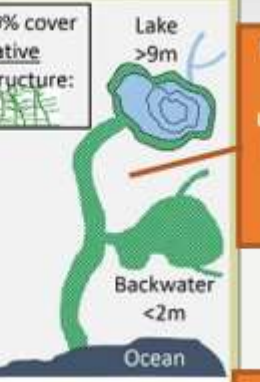

# 1. Borrowing techniques from marketing research

- Hypothetical market situation
- Each alternative has “utility” =  $U_j$
- Individuals maximize  $U_j$

Map showing the habitat utilized by the hypothetical salmonid population

Example of a level related to DO

## 2. Lake residents survey, Kenai

- Measure awareness & outreach success
- Get a baseline on public perceptions
  - Perceived risk
- Quantify use and expected change in use

**Beck and Daniels Lakes Landowners  
Elodea Removal Questionnaire**

UNF  
NARA  
SDSU  
A Division of Social and Behavioral Research

**A) Current use**

1. Which lake do you have your property on?  
 Cassin Lake  
 Beck Lake

2. How many years have you owned property on the lake?  
\_\_\_\_\_ years

3. Are you currently living on the lake?  
 Yes  
 No → **Go to Question 5!**

4. If you do not live on the lake, how often do you visit?  
\_\_\_\_\_ months per year

5. How do you rate the quality of the lake water? (Circle 1 to 5, where 1 is excellent and 5 is poor)

6. How do you rate the quantity of the lake water? (Circle 1 to 5, where 1 is excellent and 5 is poor)

7. How do you rate the quality of your soil water? (Circle 1 to 5, where 1 is excellent and 5 is poor)

8. How do you rate the quantity of your soil water? (Circle 1 to 5, where 1 is excellent and 5 is poor)

9. What is most important to you about owning property on the lake? (Check all that apply)

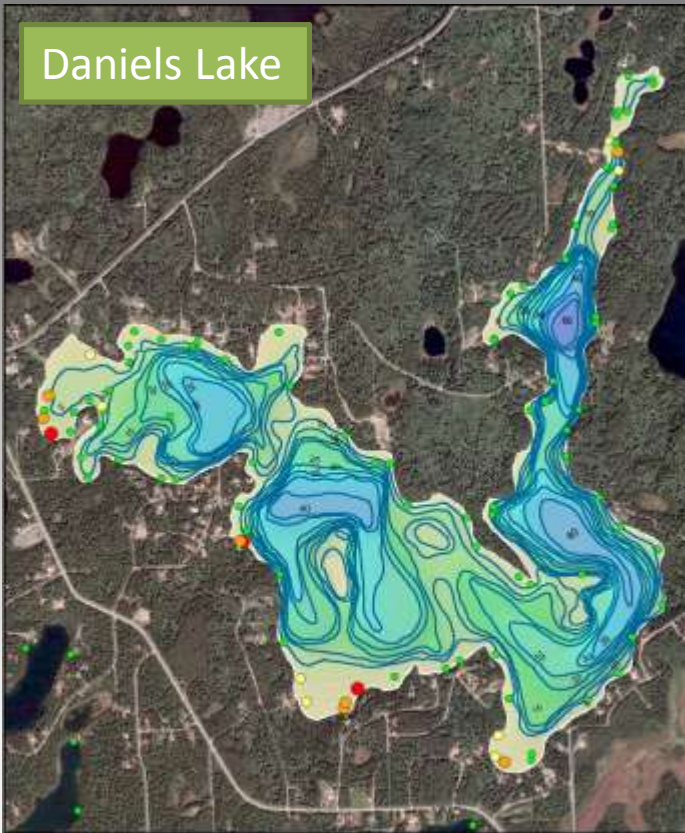

- Recreation opportunities
- Great views
- Community
- Quality of lake water
- Clean/Healthy
- Clean space
- Quality of drinking water
- Characteristics of the lake
- Other (specify): \_\_\_\_\_

**B) How do you as a land owner use the lake?**

Activity	Number of persons	On average, how many times per year?
Swimming		
Fishing		
Boating		
Canoeing/Kayaking		
Boat maintenance		
Other (specify): _____		

Do you expect to use the lake more?  Yes  No

Daniels Lake

Beck Lake

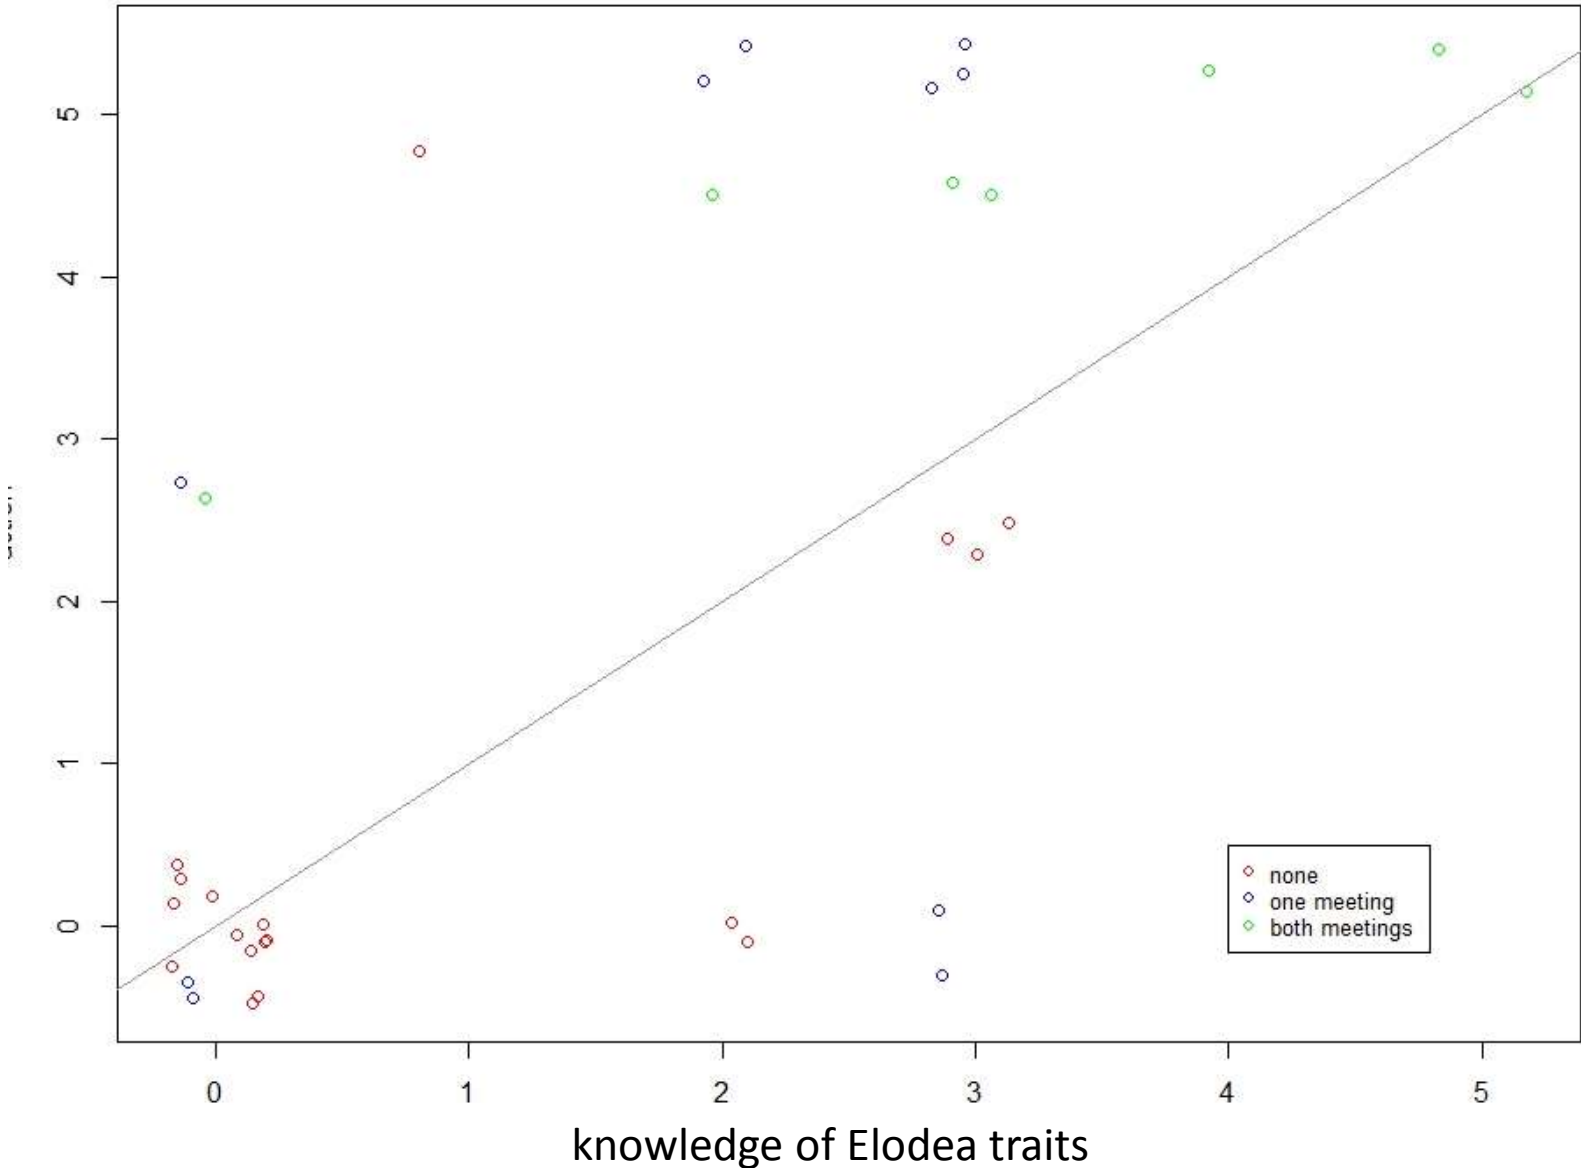

Maps: U.S. Fish and Wildlife Service, Kenai  
 Sample frame: Kenai Borough property records database

	Lake residents	Non-local property owners	Total
Initial door-to-door distribution and mailing	116	50	166
Returned mailings		4	
Responses	27	9	35
<b>Response rate</b>			<b>21%</b>

Respondents level of knowledge by public meeting attendance

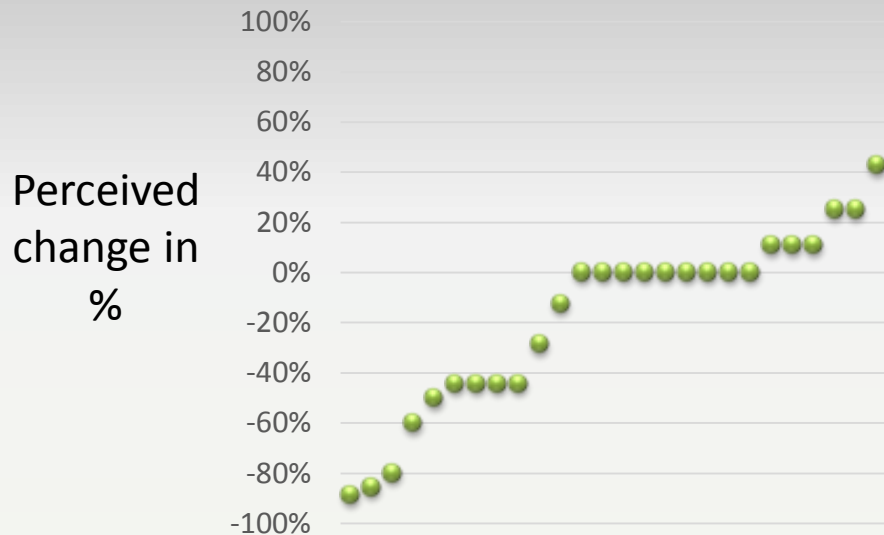

knowledge of mgmt action

	Strongly agree	Somewhat agree	Somewhat disagree	Strongly disagree	Don't know
<b><i>“Elodea is a major threat to the lake’s ecosystem, and native aquatic plants.” (n=35)</i></b>	51%	17%	9%	9%	14%
<b><i>“Elodea is a major threat to salmon and rainbow trout using the lake.” (n=35)</i></b>	46%	17%	9%	9%	20%
<b><i>“To maintain a healthy native ecosystem in the lake, chemical herbicides must be used to remove Elodea.” (n=34)</i></b>	41%	9%	6%	18%	26%
<b><i>“Non-chemical alternatives like hand pulling are just as effective as chemical pesticides in removing Elodea.” (n=33)</i></b>	9%	9%	6%	42%	33%

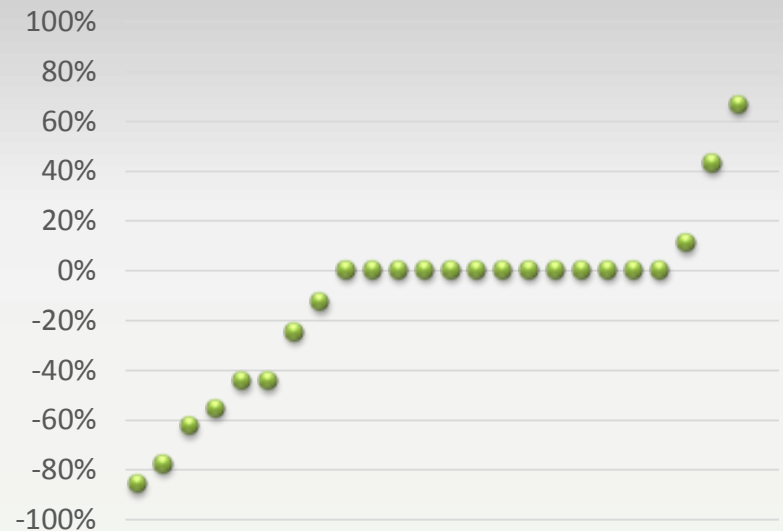

# Perceived risk to water quality after herbicide treatment (n=31)

## Lake water

Mean average:  
- 29% expected decrease

## Well water

Mean average:  
- 17% expected decrease

# Perceived risk of eating fish from the lake after herbicide treatment (n=31)

	Eat fish caught in the lake, %	Plan to eat fish after treatment, %	Stated change
Yes	74%	45%	-29%
No	26%	42%	+16%
Don't know		13%	+13%

# Stated change in use of the lake after treatment (n=31)?

Swimming

Sport fishing

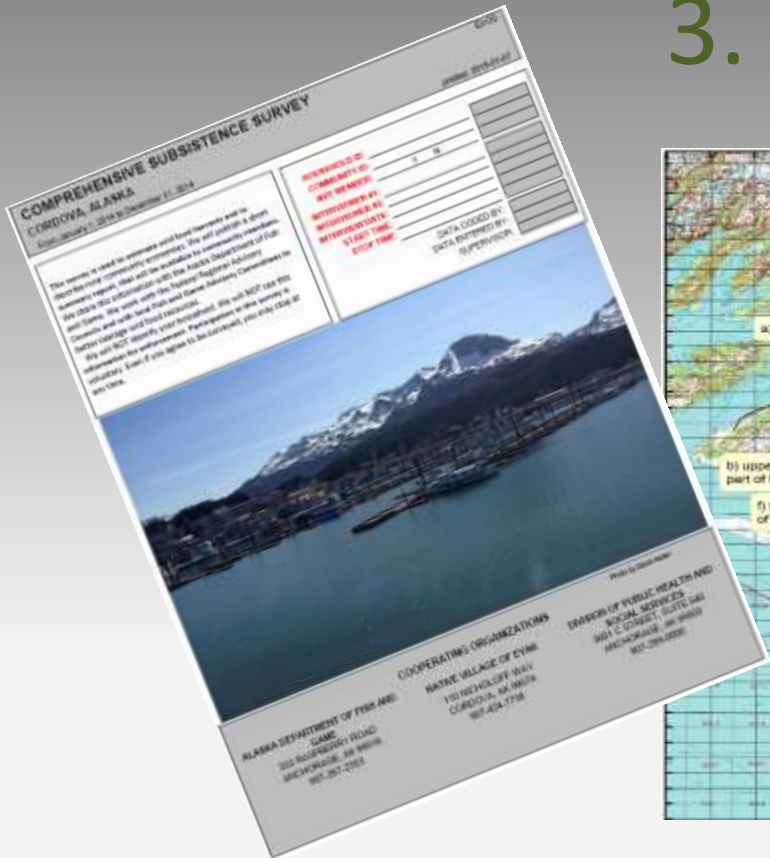

Boating/canoeing

Ice fishing

# 3. Human vector analysis

Traffic depends on:

- population size
- # of destinations
- distance from town
- attractiveness

} probability of elodea establishing in an additional lake

# 4. Social science research summer and fall 2015

- Measure public preferences and trade-offs
  - Focus groups and household surveys in:
    - Cordova
    - Fairbanks
    - Anchorage
- Develop bioeconomic framework to assess potential economic trade-offs related to action
