9 September 2015

Impacts
Invasion Process
Vectors of Introduction
Weeds to Watch For

A. Diverse native community

Open water surface

Patchy vegetation = habitat for invertebrates
(fish food)

Good dissolved oxygen concentration and pH

Surface mats impact recreation/boating/taxiing

Large temperature, dissolved oxygen, and pH
fluctuations

Stunted fish

Ecosystem Services Provided or Derived from FW Aquatic Systems

- Provisioning
 - Food
 - Freshwater
 - Fiber and fuel
 - Biochemical
 - Genetic materials
 - Biodiversity
- Regulating
 - Climate regulation
 - Hydrologic flows
 - Pollution control and detoxification
 - Erosion
 - Natural hazards
- Cultural
 - Spiritual and inspirational
 - Recreational
 - Aesthetic
 - Educational
- Supporting
 - Nutrient cycling
 - Pollination

Loss of Ecosystem Services Due To Aquatic Weeds

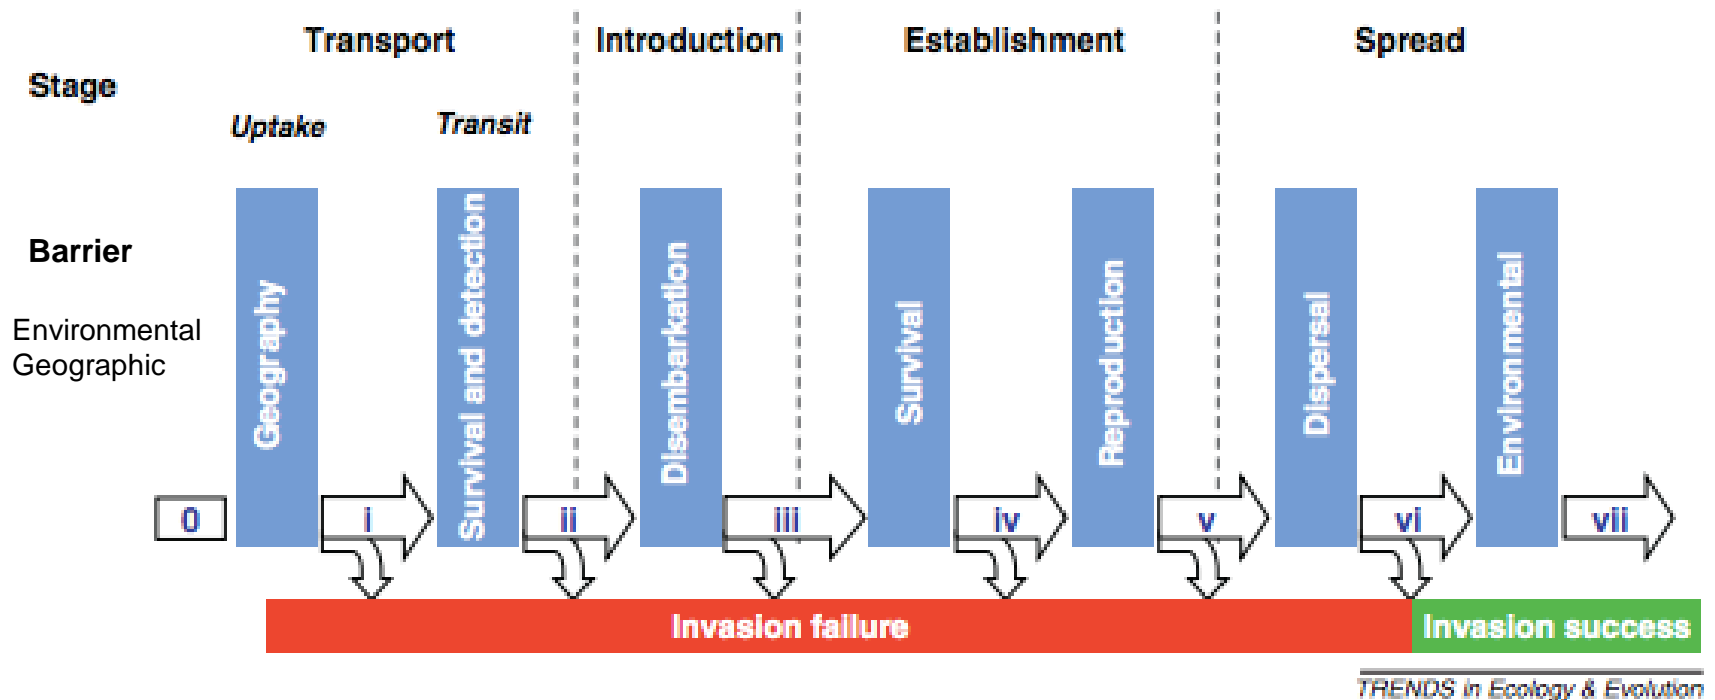

Flood Control

\$1,000,000,000	11 counties in South FL	Rockwell 2003
-----------------	-------------------------	---------------

Recreation

\$1,300,000	3 lakes in IL	Singh et al. 1984
\$10,000,000	2 lakes in FL	Milon et al. 1986
\$100,000,000	Guntersville Reservoir, AL	Henderson 1995
\$45,000,000	4 lakes in Truckee Watershed, CA	Eiswerth et al. 2000
\$84,000,000	BC (total EWM control program benefits = \$450M)	
		Newroth and Maxnuk 1993

The Invasion Process

Causes of long lag periods

- Long juvenile periods delay reproduction (trees)
- Pollen limitation (spartina in Willapa Bay Washington)
- Genetic adaptation to new environment (polyploidy)
- Long-term evolution of improved competitive abilities
- Low propagule pressure results in genetic bottlenecks and lack of genetic diversity
- Changes in biotic resistance (removal of a predator)
- Shifts in abiotic environment (nutrient regime, sediment quality, climate change)

Human Vectors of Dispersal

- Ballast Water
- Live Bait
- Aquaculture
- Aquarium and Pet Trade
- Recreational Boating
- Hunting and Angling
- Intentional Release
- Horticultural escapes
- Wildlife Restoration
- **Float planes**

Human Vector Management

Floatplanes

INVASIVE AQUATIC PLANTS and FLOATPLANE OPERATIONS: *Help prevent new infestations*

It is important to take steps now to prevent new introductions and to prevent the further spread of invasives that are already found in the region. Floatplane pilots can help to reduce potentially harmful infestations by learning more about aquatic invasive species, reporting them and following these simple steps:

Before entering the aircraft

Inspect/remove plants from floats, wires or cables, and water rudders.
Also, check the transom, bottom, chine, wheel wells, and float step area.

Pump water from floats.

Before takeoff

Do not taxi through heavy aquatic plant growth prior to takeoff.
Raise and lower water rudders to clear off plants, minimize cable stretch and improve steering effectiveness.

After takeoff

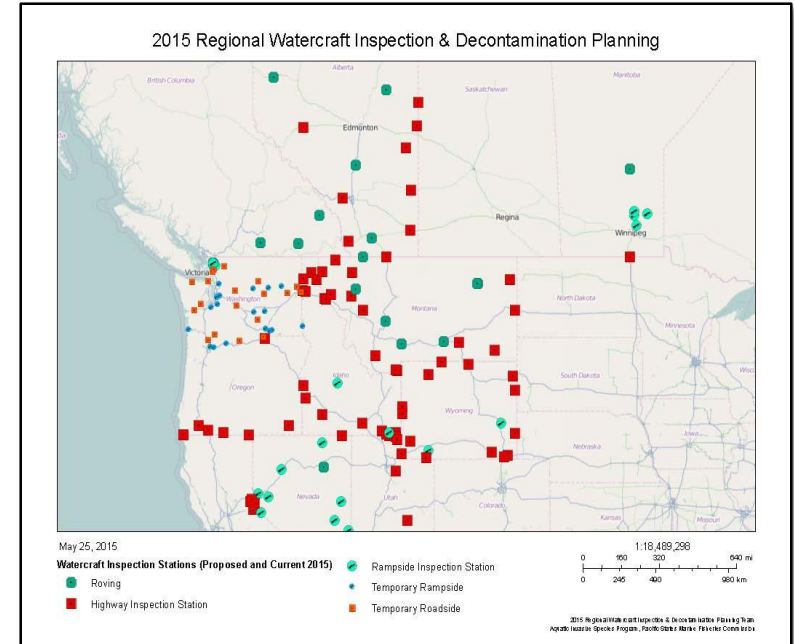

Raise/lower water rudders several times to free aquatic plant fragments while over the waters you are leaving or over land.

Home > Pond Plants > Submerged Aquatic Plants

Submerged Aquatic Plants
Submerged aquatic plants aid in maintaining clean water, discouraging algae growth, and providing oxygen. These plants can be potted in one-gallon pots and should be completely submerged underwater at least 12 inches. These plants are shipped in bunches loosely held together with rubber bands.

December 2009

Spartina spp.

- 1 native in CA (*S. foliosa*)
- 4 non-native, invasive species
 - *S. alterniflora* (Eastern & Gulf coast of North America)
 - *S. patens* (Eastern & Gulf coast of North America)
 - *S. anglica* (hybrid of English *S. maritima* & *S. alterniflora*)
 - *S. densiflora* (South America)
 - *S. foliosa* x *S. alterniflora* hybrid

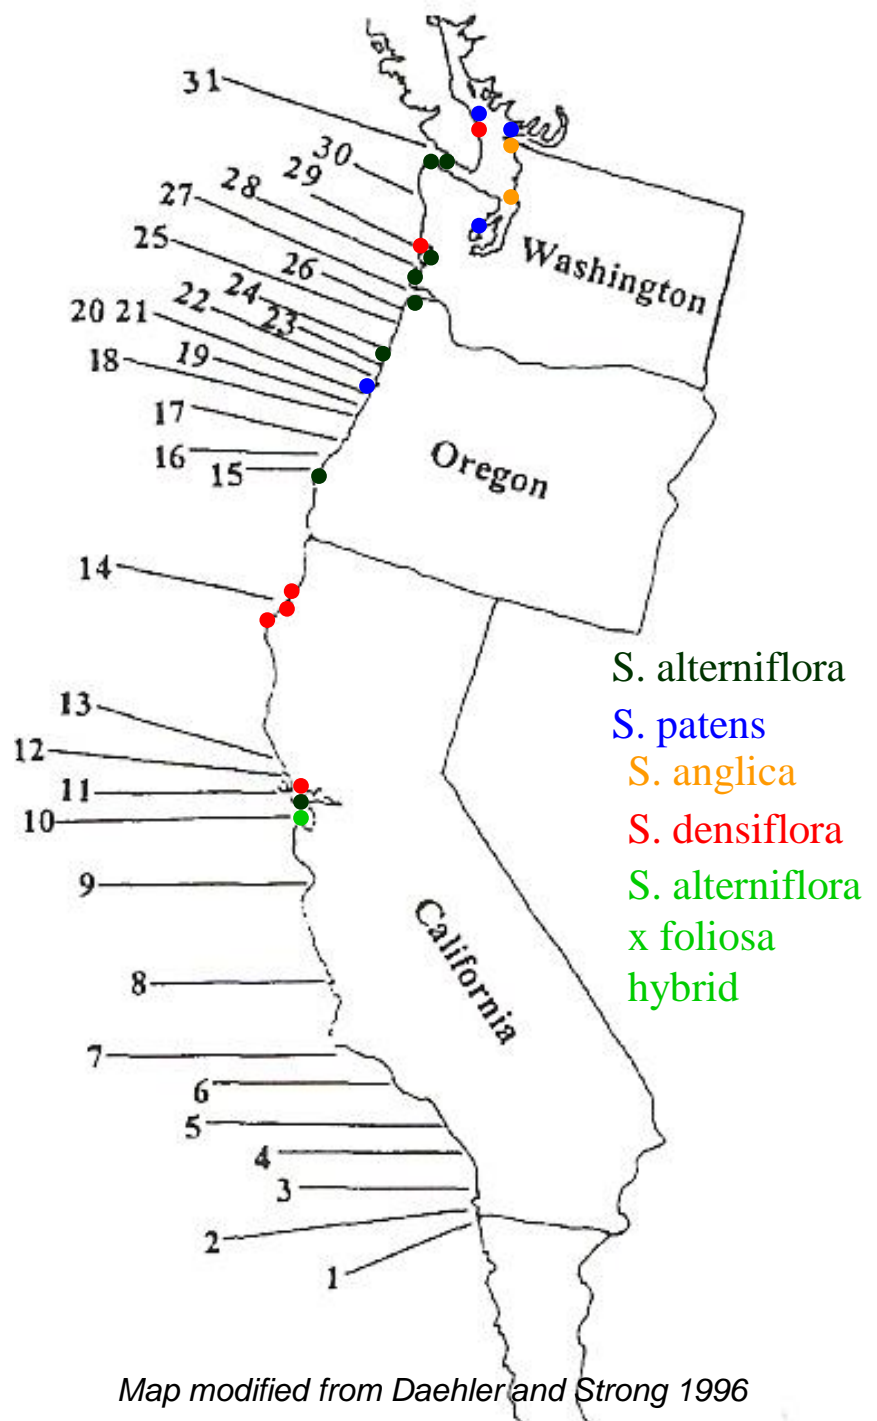

From: Patten, K. Shorebird, waterfowl, and birds of prey usage in Willapa Bay in response to *Spartina* control efforts. WSU Long Beach Extension Unit

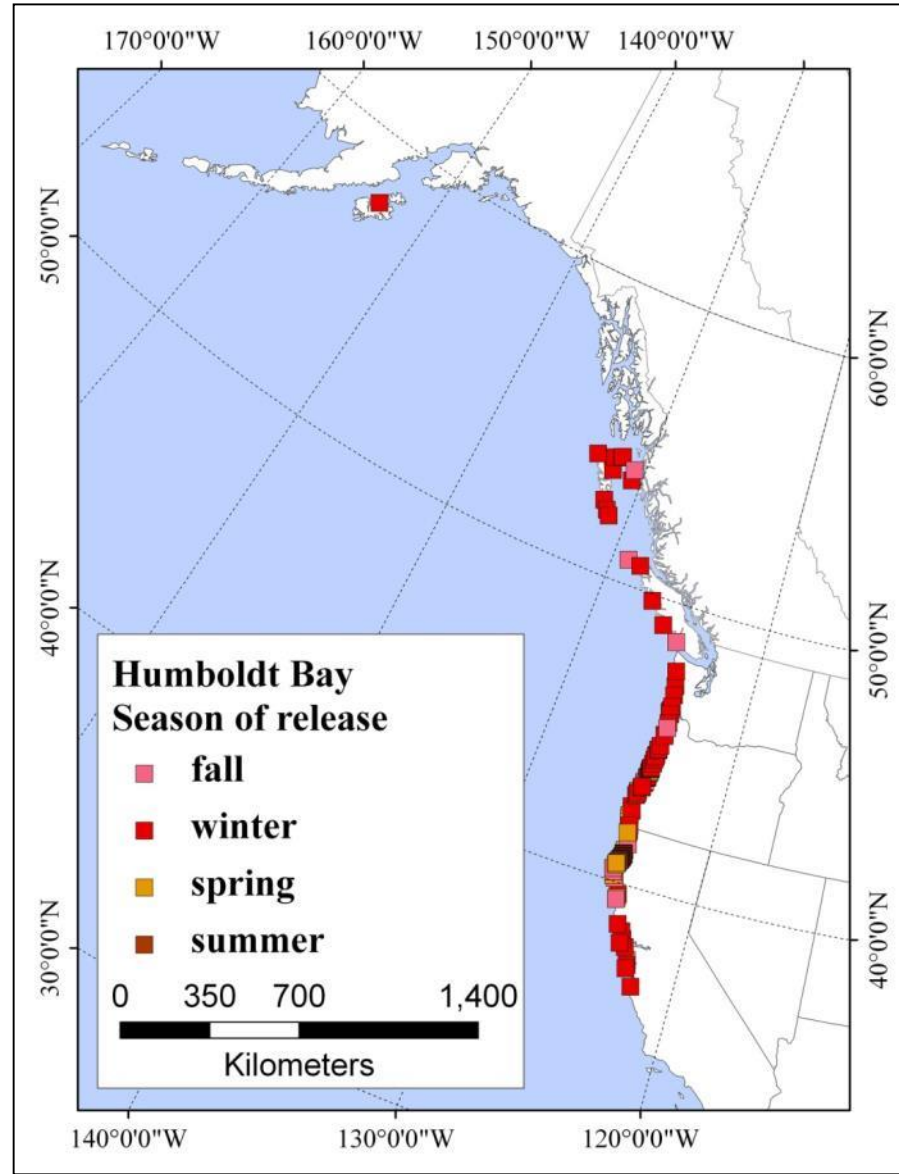

Spartina spp. Distribution

Comox Harbor, BC
Baynes Sound, BC
Fanny Bay, BC
Boundary Bay, BC
Puget Sound, WA
Gray's Harbor, WA
Willapa Bay, WA
Siuslaw River, OR
Coos Bay, OR
Sand Lake, OR
Humboldt Bay, CA
San Francisco Bay, CA

Map modified from Daehler and Strong 1996

Drift card study demonstrates that *Spartina* is a regional problem
